Mr. Benoit Arsenault
President & CEO
FRE Composites Inc.
75, Wales Street
St-André-d'Argenteuil (Québec) Canada
J0V 1X0

Dear Mr. Arsenault,

The decision to use FRE® on the recent Consolidated Edison of New York Grasslands 138 Kv transmission line project was an excellent choice in the minds of Bibeau Construction.

Competitive pricing and the ability to manufacture a major quantity of the 300,000+ feet of conduit, fittings and sweeps in accordance with the aggressive three (3) month project schedule, were all delivered upon by FRE Composites. We were all pleased with FRE Composites' response time, customer service, and their ability to meet project schedule.

We we're also pleased with the decision to allow use of the TriSeal™ push-fit joint vs. epoxy adhesive on this project. Not only did it eliminate the concerns over hardened epoxy damaging the cable jackets during installation, but it also generated an incredible labor savings over epoxy or solvent type joints. We estimated a labor savings in using the FRE® TriSeal™ system in lieu of a standard adhesive-bonded joint at an average of 15 to 20 minutes per joint. Considering there were 15,500 joints on this project at a labor rate of 65.00USD per hour, the total cost savings is over 300,000USD or 19.50USD per joint plus a 20,000USD cost saving to eliminate the epoxy kits. In addition we were able to place concrete encasement directly on the conduit with no curing time, thus allowing us to backfill the same day the conduit was installed.

The accuracy of the fabricated sweeps has been excellent. The willingness of FRE Composites to fabricate special bends on an as needed basis has allowed us to overcome several unanticipated field conditions with a minimum of delay.

We appreciate the effort put forth by the entire FRE Composites' team on this project. I would be happy to discuss your performance, and the performance of your products with any of your future clients.

Sincerely yours,
BibEAU Construction Co., Inc.

C. Kimbell Webster
Vice President
